Supporting Newcomers with Disabilities

This issue explores barriers to accessing settlement services for newcomers to Canada with disabilities and how settlement service providers can improve their accessibility. This info sheet focuses on adults with disabilities, but more information on supporting both children and adults can be found on AMSSA’s Specialized Resource Page on Newcomers with Disabilities.

Introduction

1 in 7 adults in Canada report having a disability that limits their daily activities. Although the Immigration and Refugee Protection Act (2001) states that foreign nationals are inadmissible on health grounds if their health condition “might reasonably be expected to cause excessive demand on health or social services,” newcomers to Canada may have disabilities that are not expected to cause excessive demand. In addition, refugees, protected persons, and those in the family class are exempt from this clause. Finally, disability is not necessarily a lifelong condition, and newcomers may develop or be diagnosed with disabilities after arrival in Canada. Therefore settlement services can expect to encounter clients with disabilities in the course of their work. IRCC’s recipient guidelines contain provisions for funding this.

Terminology and Statistics

The term “disability” encompasses many different conditions, including physical and developmental disabilities, mental health conditions, and chronic diseases. The most common types of disability in Canada are:

- Pain-related (9.7%)
- Flexibility (7.6%)
- Mobility (7.2%)
- Mental health-related (3.9%)
- Dexterity (3.5%)
- Hearing (3.2%)
- Seeing (2.7%)
- Learning (2.3%)
- Memory (2.3%)
- Developmental (0.6%)
- Unknown (0.3%)

The prevalence of disability increases with age, and women are more likely than men to have a disability. About one quarter of all people with a disability are considered to have a severe disability.

The World Health Organization defines disability as an umbrella term, covering impairments, activity limitations, and participation restrictions.

- An impairment is a problem in body function or structure.
- An activity limitation is a difficulty encountered by an individual in executing a task or action.
- A participation restriction is a problem experienced by an individual in involvement in life situations.

Settlement Needs of Newcomers with Disabilities

Newcomers with disabilities can be regarded as multi-barriered. Disability in Canada correlates negatively with employment rates, income, education, and housing, so newcomers with disabilities can be expected to face additional hardship in these areas.

![Graph showing % in employment and housing need](Figures are for people in Canada over age 15)

Newcomers may also need to be supported to understand the social meaning of disability in Canada:

- Legislation prohibits discrimination against people with disabilities and guarantees people with disabilities equal benefit and protection under the law.
- Employers and service providers have a duty to accommodate the needs of people with disabilities (unless the accommodation this would cause “undue hardship”).

Social Model of Disability

The “social model of disability” is a term used to reflect the fact that while impairments and conditions are issues of fact, the degree to which an impairment affects an individual’s ability to participate in society is highly dependent on social and cultural factors. Impairments or conditions which pose relatively small barriers to full participation in Canada might have posed large barriers in a newcomer’s home culture, and vice versa.

Barriers to Accessing Settlement Services

The barriers to accessing settlement services faced by people with disabilities are as diverse as newcomers with disabilities themselves, varying by country/culture of origin, type of impairment or condition, and the individual themselves. Settlement at Work provides a useful summary of the five types of barriers to accessibility:

<table>
<thead>
<tr>
<th>Barrier</th>
<th>Definition</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical / Architectural barriers</td>
<td>Features of buildings or spaces.</td>
<td>Hallways/doorways that are too narrow to be used with a wheelchair or electric scooter.</td>
</tr>
<tr>
<td>Technology barriers</td>
<td>Technology that can’t be adapted to support assistive devices.</td>
<td>Flasing website graphics that may cause seizures.</td>
</tr>
<tr>
<td>Information / Communication barriers</td>
<td>Something that prevents a person from understanding information.</td>
<td>Print of documents is too small to read.</td>
</tr>
<tr>
<td>Organizational barriers</td>
<td>An organization’s policies, practices, or procedures</td>
<td>A policy that prohibits computers in classrooms and workshops, with no exception for assistive technology.</td>
</tr>
<tr>
<td>Attitudinal barriers</td>
<td>Attitudes of people involved in the provision of a service</td>
<td>Assuming that a client with a developmental disability will not be able to find suitable employment.</td>
</tr>
</tbody>
</table>

Improving Access to Settlement Services

**Physical Barriers**

Measuring Up lists seven principles of universal design:

- **Equality**: space is useful to people with diverse abilities.
- **Flexibility**: the space accommodates a wide range of abilities.
- **Simplicity**: the space is easy to navigate and understand.
- **Perceptible information**: the space communicates necessary information effectively regardless of a person’s sensory abilities or any background conditions.
- **Tolerance**: the space minimizes hazards and safety concerns.
- **Low physical effort**: The space can be used easily with minimal effort.
- **Appropriate size and space**: The space is sized to accommodate everyone’s approach, reach, manipulation and use regardless of body size, posture or mobility.

**Technology Barriers**

The Web Accessibility Initiative gives guidelines on ensuring that websites and other technology are fully accessible, including features like support for screen-reading technology, captioning for audio content, support for keyboard shortcuts, and other measures.

**Information and Communications Barriers**

CNIB’s Clear Print Accessibility Guide has recommendations concerning the contrast, colour, spacing, font, layout, and paper finish of printed materials.

Public Works and Government Services Canada provides Guidelines for Writing in Plain Language, including focusing on the reader, using familiar words and phrases, and keeping sentences concise.

**Accessible Events and Activities**

- **Advertising**: Provide plenty of notice, and include information about the event’s accessibility in advertising materials.
- **Registration**: Have a way for people to indicate their needs during the registration process.
- **Transportation**: If possible, choose an accessible location for the event and post clear signage.
- **Setting up the room**: Leave plenty of space around tables and other gathering points and try to eliminate/reduce background noise.
- **Volunteers and facilitators**: Train volunteers and facilitators in how to respectfully respond to and assist people with disabilities.
- **Agenda**: Ensure regular breaks in the agenda of meetings and workshops.
- **Presentations**: Remind presenters to remain on schedule and ensure they describe the content of their slides or other visual materials.
